INTRODUCTION

This report provides a quantitative assessment of the current use of land in the Southern Mid Coast region. The report addresses seven major types of land use. The major categories are: residential; manufacturing; transportation; communication and utilities; trade and services; leisure time areas and facilities; resource production and extraction areas and other land and water areas. Most of these major categories are sub-divided for additional detailed analysis.

It is important to note that this report does not examine a full range of land uses. Since the document was prepared as an integral part of the Commission's Water Quality Management Program, the major and minor land use categories examined were chosen because they could potentially affect the quality of water. (For example, high concentrations of seasonal homes might indicate a threat to water quality from inadequate sewage disposal and therefore warrant detailed analysis. Large agricultural areas may indicate potential erosion problems when compared against soil types and crop production for the site.)

The draft report is divided into three major sections: the first discusses methods and data sources used; the second presents a summary of land use in the region; and the third section displays regional, county and town summaries of the acreage and proportion of total area of each of the major and minor categories.

METHODS AND SOURCES

Introduction

This section is divided into three sub-sections: the first discusses the process used to develop information contained in the report; the second provides a detailed list of sources, including explanations of how they were developed; while the third sub-section contains a listing of the land use classifications. This list includes definitions of terms that are not self-explanatory.

Methodology

The following procedures were used by the staff in the preparation of this report.

First, sources of information on the location and size of land uses related to water quality were identified. These sources are later discussed in detail.

Second, base maps of the Southern Mid Coast region, at a scale of 1:48,000 (1 inch = 4000 feet) were obtained. These maps, provided by the State Planning Office, were derived from U.S. Geological Survey topographic maps.

An overlay was used to plot land areas greater than ten acres, a second overlay was used to locate, as points, land uses of less than ten acres.

Fourth, all data available from identified sources, (i.e. maps, reports, etc.) was transferred to the appropriate overlay. In mapping, residential areas greater than ten acres, only those areas with a minimum density of half a dwelling per acre, were included.

Fifth, all data on the greater than ten acre and less than ten acre overlays was quantified. Plotted areas (greater than ten acres) were measured to determine acreage using a manual planimeter. Land use instances located on the less than ten acre overlays were counted.

Sixth, acreage for "commercial foresting production" was determined by town. This category is used on the greater than ten acre overlay as an "all other" classification -- all land uses not mapped are included in this category. By using one category, it is possible to cover the total land area of a town and thus determine percentage of area by town for other major and minor land uses. In determining the area of "commercial forestry production" all known land use acreages were added together. Next, to eliminate other non-forestry land uses, the acreages of the rights-of-way for public and private roads, transmission lines and oil pipelines were developed. Finally, these two figures were subtracted from the adjusted municipal land area totals developed by the Commission.

Figures for total surface area, total land and total water were derived from the Area Measurements Reports published by the U.S. Department of Commerce, Bureau of Census. This report provided three figures: total land area; total water area; and total surface area - all in square miles. Each of these figures was converted to acres. Total water area was defined to include lakes, reservoirs, etc. over forty acres in size. In order to obtain a more accurate total water area, ponds between ten and forty acres were added to the total water area and subtracted from the total land area. (Data regarding ponds was obtained from the publication, Great Ponds in Maine, State Planning Office, 1973.)

Thus, new definitions were derived as follows:

Total Land Area - Dry land; land temporarily or partially covered by water, such as swamps; streams, canals, etc. less than one eighth mile in width; and lakes, reservoirs, etc. less than ten acres.

Total Water Area - Streams, canals, etc. greater than one eighth mile in width; and lakes, reservoirs, etc. greater than ten acres.

Total Surface Area - The sum of total land area and total water area.

Finally, major and minor land areas greater than ten acres were compared to the total land area of each town, county and the entire region. Minor land uses were compared to both the total land area of the jurisdiction and the major category. Acreages, instances and percentages are found in the tables in Section Three.

The above discussion points out several limitations of the report. While efforts were made to be as accurate as possible, errors may have been made in the transfer of data from source maps and in use of the planimeter on the greater than ten acre overlay.

The number of acres indicated for a particular land use in the greater than ten acre tables may not be the total number of acres for that land use, because there may be some sites that are less than ten acres.

Further, as mentioned in the Introduction, this report is not an inclusive land use assessment. It is an assessment of those land uses which could effect the quality of the region's water. Therefore, such land uses as public buildings, institutions or low density residential areas are not specifically addressed. For the purposes of this report these land uses are covered in the "commercial forestry production" category.

Sources

The primary data source was a series of existing land use maps compiled by the Southern Mid Coast Regional Planning Commission in 1976. Land uses were drawn on a separate map for each town at the scale of 1:12,000 (1 inch = 1000 feet). Other sources of information included the State Planning Office, Maine Department of Transportation, Maine State Department of Environmental Protection, Maine State Development Office, the Maine State Bureau of Forestry, United States Department of Commerce, the Soil Conservation Service, New England Telephone, Maine Central Railroad, Central Maine Power and the Brunswick Naval Air Station.

Brunswick Naval Air Station - The Naval Air Station provided blueprints of pipeline length and rights-of-way width determined using the scale on the blueprints. The pipeline runs from Harpswell Neck to the Brunswick Naval Air Station.

Central Maine Power - Central Maine Power provided acreages by town for "high tension" power line rights-of-way.

Maine State Department of Conservation, Bureau of Forestry - Along with the Soil Conservation Service, recommended the method used to obtain the "Commercial Forestry Production" category.

Maine Department of Environmental Protection - Commission staff used Department of Environmental Protection files in determining existence and location of solid waste and sludge disposal areas.

Maine Department of Transportation - The Department supplied data regarding transportation rights-of-way. Average rights-of-way widths and roadway lengths were used to determine the area of the rights-of-way.

The widths used are as follows:

for Interstate 95 - 700 feet;

Rte. 1 (four-lane divided portion) - 300 feet;

Rte. 1 (improved two lane portion) - 100 feet;

Rte. 1 (through developed portions of Bath, Brunswick and Wiscasset) - 48 feet;

Carlton Bridge - 28 feet;

all other public ways - 66 feet and;

Private ways - 33 feet.

Highway mileages were obtained from the publication State of Maine Road Mileages, Maine Department of Transportation, 1977.

Maine State Development Office - The publication Maine Marketing Directory, 1976, was one source of data regarding industries in the region.

Maine State Planning Office, Natural Resource Division - The State Planning Office provided assistance to Commission staff in locating airports, recreation areas and facilities, and wildlife management areas.

Maine Coastal Inventory Maps - 1977 - a series of maps at the scale of 1:48,000 (1 inch = 4000 feet) for all coastal communities - all communities in this region except Bowdoin and Jefferson. Information included in this series is topography, slope, soils, fish and wildlife, land cover types, recreation facilities and activities, and watersheds and water classification; lake management capabilities.

New England Telephone - New England Telephone provided acreages by town for toll line rights-of-way.

Soil Conservation Service - The Soil Conservation Service provided assistance to Commission staff in identifying agricultural land. Along with the Maine Bureau of Forestry, SCS recommended the method used to obtain the "Commercial Forestry Production" category.

Southern Mid Coast Regional Planning Commission - Existing Land Use Mapping Series, 1976 - The mapping series was developed by Commission staff. Land uses were drawn on a town base map at the scale of 1:12,000 (1 inch = 1000 feet). Base maps, provided by the State Planning Office, are photo enlargements of United States Geological Survey topographic maps of scale of 1:62,500. Land Use information was developed from 1974 aerial photographs, supplemented and field checked by staff conducted "wind-shield surveys", and verified by a person or group in each town. Information on these maps includes: single, multi-family, and seasonal residences; mobile homes; commercial land; mixed residential/commercial; seasonal commercial; industrial; public (schools, churches, parks, town offices, cemeteries); recreation areas; farms; gravel pits; transportation, communication, and utility rights-of-way; resource protection areas; and forest land.

United States Department of Commerce, Bureau of Census - The publication Area Measurement Reports, was used to obtain total land area, total water area and total surface area.

United States Department of Interior, Bureau of Mines - The Bureau provided a series of maps for determining the existence and location of mining activities.

LAND USE CODE DEFINITIONS

Land: Dry land; land temporarily or partially covered by water, such as swamps, streams, canals, etc. less than one-eighth mile in width; and lakes, reservoirs, etc., less than 10 acres.

Water: Streams, canals, etc. greater than one-eighth mile in width; and lakes, reservoirs, etc. greater than ten acres.

Total Surface Area: Sum of land and water. Source: Southern Mid Coast Regional Planning Commission Adjusted Land Area Total (see section on methodology)

1000 Residential: Land and structures used as a dwelling place or used by residents.

Source: Southern Mid Coast Regional Planning Commission Existing Land Use Mapping Series - 1976.

1000 - Year-round Residential: Land and structures used as a dwelling intended for year-round occupancy.

1600 - Seasonal Residential: Land and structures used as a dwelling not intended for year-round occupancy.

1000/1600 - Mixed Residential: Mixed year-round and seasonal residential with year-round predominating.

1600/1000 - Mixed Residential: Mixed year-round and seasonal residential with seasonal predominating.

2030 - Manufacturing I and II: Non-durable and durable goods.

2410 - Sawmills: Includes establishments primarily engaged in sawing rough lumber and timber from logs; only permanent sawmills plotted.

Source: SMCRPC Existing Land Use Mapping Series - 1976.

3230 - Cement Manufacturing: Source: 1976 Maine Marketing Directory (State Development Office) and area telephone directories.

3260 - Concrete, Gypsum, Plaster Products Manufacturing:

4310 - Airports - Source: SMCRPC Existing Land Use Mapping Series - 1976, Maine Coastal Inventory Map Series, Maine State Planning Office.

4510 - Freeways: Route 1 and Interstate 95 Rights-of-Way. Source: SMCRPC Existing Land Use Mapping Series - 1976; acreage developed with assistance from Maine Department of Transportation.

4540/90 - Public Highways, Streets and Roads: All public highway, street, and road rights-of-way except Route 1 and Interstate 95.

Source: SMCRPC Existing Land Use Mapping Series - 1976; acreage developed with assistance from Maine Department of Transportation.

4540/90 - Private Highways, Streets, and Roads: Roads never accepted by a town, not open to the public.

Source: SMCRPC Existing Land Use Mapping Series - 1976; acreage developed with assistance from Maine Department of Transportation.

Note: Maps make no differentiation between public and private highways.

4595 - Unimproved Forest Road: Forest roads primarily used for transport of forest products but generally not capable of all weather use by trucks and two wheel drive vehicles.

Source: SMCRPC Existing Land Use Mapping Series - 1976.

- 4596 - Forest Haul Road: Roads primarily used for hauling or skidding of timber and are generally not passable by two wheel drive vehicle. (no data).
- 4630 - Highway Maintenance Area: Maine Department of Transportation and municipal sites used for material storage.

- 9400/1000 - Unused Structures/Residential: Source: Best available data from various sources.

REGIONAL SUMMARY

Extending westward from Brunswick and Harpswell in Eastern Cumberland County through Sagadahoc and Lincoln Counties to Waldoboro, the Southern Mid Coast region includes almost 870 square miles. Of the region's 556,480 acres, 77% is land and 23% inland waters. Lincoln County, the largest element, contains 57% of the regional land total. Sagadahoc County accounts for 33%, and the final 10% lies in Eastern Cumberland. Inland water surface area totals are similar with Lincoln County containing 49%, Cumberland 32%, and the balance in Sagadahoc County.

Total residential land use, determined by acreage of sites over 10 acres and site occurrences (areas of seasonal land use that are less than 10 acres in size) are as follows:

<u>County</u>	<u>#Acres</u>	<u>#Occurrences</u>
Lincoln	14,126	204
Sagadahoc	7,778	102
Eastern Cumberland	6,373	41
Totals	28,277	347

Data indicates from 6% to 7% of total land area has been developed for residential purposes. A substantial number of residential holdings, particularly in Lincoln and Eastern Cumberland Counties, are used as seasonal or partially seasonal dwellings. The major determination of seasonal vs. year-round useage, as indicated by Sagadahoc County data, seems to be the increase in year-round homes when the employment potential of the area increases.

Manufacturing sites comprise the smallest land use category. Ninety percent of such use is devoted to general manufacturing. Lincoln County devotes the largest amount of land to this activity; Eastern Cumberland the least. This order is reversed, however, when considering the land percentage devoted to manufacturing.

Transportation systems utilize 4.5% of total available land area. Some 95% of this total is in public highways, streets, and private roads.

Land occupied by trades and services accounts for 3354 acres. Some 79% of this total is the Brunswick Naval Air Station and it's support facilities. The balance of the acreage is fairly evenly distributed among the three sub-regions. Brunswick and Harpswell, however, have a higher percentage of land in this category than the two counties.

Regionwide, leisure time areas and facilities cover 3537 acres. The majority of this land lies in Reid and Popham Beach State Parks. In addition, there are 100 other small recreational areas.

Agriculture is the second most significant land use in the region, covering 29,375 acres or 6.8% of the total land. It is interesting to note that crop production represents a small portion of this total. The four largest agricultural activities include: "related fields (grasslands)," (58% of the total); "dairy farms," (9%); "beef cattle farms," (6%) and "blueberry farms," (5.5%).

Forestry and related activities is the largest land use category, covering 327,464 acres of the total land area. Over 99% of the category is being used for commercial forestry production. Other identified related activities include Christmas tree plantations, nurseries, and mixed forestry recreation areas.

Eight hundred and twenty acres in the region are being used for mining activities. Of this total, 96% is being used for sand and gravel quarrying activities. In addition, there are 119 sand and gravel borrow pits, less than ten acres in size and thus not included in the acreage figure.

Land being used for wildlife management activities occupies 2,545 acres of the total land area. One thousand one hundred and fifteen acres are in Lincoln County, 1,168 acres in Sagadahoc County and 262 acres are in Brunswick and Harpswell.

Finally, other land and water areas cover 26,606 acres in the region. Roughly, two-thirds of this figure is undeveloped land (wetlands). The balance is fresh water areas.
